PROFILE

Energy & Power Engineering undergraduate with a Computer Science minor. Hands-on experience in robot systems, real-robot demonstration collection, industrial testing, and industry research. Currently exploring data preparation and VLA fine-tuning as part of embodied-AI engineering.

EDUCATION

Beijing University of Technology | B.Eng., Energy & Power Engineering (New Energy)

Computer Science minor | Entered Sep 2023; expected graduation Jul 2027

EXPERIENCE

Unitree Robotics | Beijing R&D Sep 2026 - Present

SLAM Systems Intern

- Debug ROS 2 / SLAM systems on Jetson Orin; inspect LiDAR, odometry, and point-cloud topics and support bank-guidance robot deployment and integration.
- Restored ROS 2 topic connectivity in one deployment troubleshooting case by switching to CycloneDDS.
- Use PICO VR to teleoperate humanoid robots and collect demonstrations of grasping, carrying, and placing objects.
- Explore data cleaning, annotation, episode segmentation, and VLA / imitation-learning fine-tuning and on-robot testing. Training results and autonomous task execution still require validation.

Unitree Robotics | Hangzhou Jul 2026 - Sep 2026

Technical Support Intern

- Supported A2 quadruped application development and troubleshooting with Linux, ROS 2, and Unitree SDK2; documented procedures and reviewed industrial-inspection deployment needs.

Bojia Capital Jan 2026 - Feb 2026

Investment Research Intern

- Supported private-market research on energy storage, supercomputing, silicon wafers, innovative medicines, and dexterous hands; prepared research materials and joined an LLM-company visit.

SUPCON Technology | Nuclear Power Unit Jul 2025 - Aug 2025

Industrial Automation Intern

- Performed basic DCS / PLC testing and integration; checked drawings against assemblies and documented issues for production and test teams.

Bohua Technology Jul 2024 - Feb 2025 (separate placements)

International Markets & Industrial Testing Intern

- Supported board and prototype testing and overseas-customer FAT; researched wireless vibration sensors and predictive maintenance, and presented a competitor report.

CITIC Securities | Zizhuyuan Branch Jan 2024 - Feb 2024

Wealth Management Intern

- Supported customer communication, product introductions, and account-opening activities; independently prepared and delivered one financial-product presentation.

SELECTED RESEARCH

Industrial-robot predictive maintenance: Reviewed component failure modes, data sources, and maintenance workflows.
Flow-battery health estimation: Contributed literature and method review on mechanism-informed PSO and ELM. No public deployment or experimental results for these studies.

SKILLS

Engineering: Python and C basics; Linux / WSL; ROS 2, DDS / CycloneDDS, Unitree SDK2; Jetson Orin; PICO VR teleoperation; DCS / PLC testing and FAT.

Research & communication: Industry and competitor research, reports, customer communication; Mandarin (native), English (CET-6; technical reading and day-to-day communication).
